

About Us

C-Store Water Solutions, LLC is a joint venture between Principal Water Filtration, LLC (Principal) and Integrity Water Treatment, LLC (Integrity). The joint venture was formed to pursue opportunities to provide water treatment solutions to convenience stores throughout Florida.

Principal was formed by Paul Jobmann in 2015 following a 17-year career as an engineer for environmental consulting firms in Connecticut and Florida. Wanting to build on his experience designing, building, and operating water treatment systems, Paul formed Principal to design and distribute engineered solutions for drinking water problems.

Integrity was formed by Daniel R. Downing, Jr. in 2006 to provide treatment for city and well water. Throughout his career, Daniel has designed, built, installed, and serviced many brands of water treatment systems for residential and commercial customers.

- Reverse osmosis
- Carbon filters
- Disinfection
- Odor removal
- Chemical removal
- Iron & sulfur removal
- Descalers
- Sediment removal
- Custom treatment systems
- Point-of-use beverage service systems

OUR SERVICES

Drinking and Food Service Water Treatment

If you have or plan to have beverage and food service in your convenience store, high quality water is a necessity. Chlorine and hardness can affect the taste of beverages and food and it can damage coffee/espresso makers, water heaters, ice machines, beverage dispensers, and dish washers. Water treatment systems make store owners money by having happier return customers and can save owners money by protecting their investments in equipment and reducing service calls.

TREATMENT BENEFITS

- ➔ Better tasting beverages and food
- ➔ Extend the life of beverage and food service equipment
- ➔ Reduce downtime and equipment service
- ➔ Reduce utility and detergent costs

CAR WASH WATER TREATMENT

Spotless car washes require high quality water during the wash, rinse and final rinse stages. Hardness, if not removed, results in the need to use more detergents in the wash stage and spots in the final rinse. Hardness can also damage the car wash equipment resulting in higher costs for service or replacement.

TREATMENT BENEFITS

- ➔ No spots = happy customers
- ➔ Reduce detergent costs
- ➔ Extend the life of equipment
